Front-End Web Certification Rubric

Student Name: Yifutehaer Nijiati *(See Notes at the end of document)*

Course: JavaScript	Course No. ITI 390	CRN: 34890
--------------------	--------------------	------------

Evaluation Metric	Completed	Not Completed	Recommended Remediation
Session I Exercise Projects			
Complete exercise 2.1 – Modification of the Miles Per Gallon application.			
1. Understand the modification of this application so the result is displayed in the browser instead of an alert statement.	✓		
2. Link to your solution file.	✓		
Complete exercise 2.2 – Modification of the Test Score application.			
1. Understand how the same code can be replaced with less code.	✓		
2. Understand the modification of this application so the variable declarations for the three scores parse the entries before storing their values.	✓		
3. Understand the modification to change the statements that accumulate the score in the total, so they use the += assignment operator.	✓		
4. Link to your solution file.	✓		

**Montgomery College

Front-End Web Certification Program**

Evaluation Metric	Completed	Not Completed	Recommended Remediation
Complete exercise 2.3 – Modification of the Simple application.			
1. Understand the modification of the Miles Per Gallon application so it gets the length and width of a rectangle from the user, calculates the area and the perimeter of the rectangle, and displays the results in the browser.	✓		
2. Link to your solution file.	✓		
Session II Exercise Projects			
Complete Exercise 4-1 – Enhance the Miles Per Gallon application.			
1. Understand the modification of the if-else statement that provides the data validation, so it checks each text box separately.		✓	Not Completed
2. Understand the addition of a Clear Entries button below the Calculate MPG button.		✓	Not Completed
3. Understand the modification of the HTML for the Clear Entries button so it has a unique id and an appropriate value attribute.		✓	Not Completed
4. Understand the addition of a function expression named clearEntries() that clears the entries in the four text boxes.		✓	Not Completed
5. Understand the addition of a statement in the onload event handler that attaches the clearEntries() function to the click event of the Clear Entries button.		✓	Not Completed
6. Understand the addition of a statement to the onload event handler that attaches the clearEntries() function to the double-click event of the miles text box.		✓	Not Completed
7. Link to your solution file.		✓	Not Completed

Montgomery College
Information Technology Institute (ITI)
Front-End Web Certification Program

Evaluation Metric	Completed	Not Completed	Recommended Remediation
Complete Exercise 4-2 – Build a new Future Value application.			
1. Understand the creation of a function expression named calculateFV(). It should have three parameters that receive the user's entries: investment amount, interest rate, and number of years. It should calculate the future value based on these parameter values, round the result to two decimal places, and return the rounded result.		✓	Not Completed
2. Understand the creation of a function expression named processEntries() that gets the user entries with no data validation.		✓	Not Completed
3. Understand the code statement that calls the calculateFV() function and stores the result that's returned in the fourth text box.		✓	Not Completed
4. Understand the creation event handler for the onload event that attaches the processEntries() function to the click event of the Calculate button. This handler should also move the focus to the first text box.		✓	Not Completed
5. Understand the declaration of a variable that will be used to store an error message right after the other variable declarations.		✓	Not Completed
6. Understand the if-else statement that tests whether each entry is valid.		✓	Not Completed
7. Understand if an entry is invalid, assign an error message to the variable you declared in step 9 and move the focus to the text box that contains the error. The values for the three entries should be as follows: a. Investment is a number that's greater than zero and less than or equal to 100,000; b. Interest rate is a number that's greater than zero and less than or equal to 15; c. Years is a number that's greater than zero and less than or equal to 50.		✓	Not Completed

Front-End Web Certification Program

Evaluation Metric	Completed	Not Completed	Recommended Remediation
8. Understand the addition of the another if-else statement that tests whether any errors were detected.		✓	Not Completed
9. Link to your solution file.		✓	Not Completed
Complete Exercise 6-1 – Experiment with the FAQs application.			
1. Understand the toggle event handlers		✓	Not Completed
2. Understand the className property instead of the hasAttribute(), removeAttribute(), and setAttribute() methods.		✓	Not Completed
3. Link to your solution file.		✓	Not Completed
Complete Exercise 6-2 – Add controls to the Register application.			
1. Add a radio button for Mobile phone and a text area for Comments		✓	Not Completed
2. Understand how to add the JavaScript code that gets the data entered in the two new controls.		✓	Not Completed
3. Understand how to change the code in the JavaScript file so instead of displaying the comments in the table, the length of the comments entry is displayed.		✓	Not Completed
4. Link to your solution file.		✓	Not Completed
Complete Exercise 6-3 – Enhance the Email List application			
1. Enhance the data validation so it displays the error messages in the span elements.		✓	Not Completed
2. Understand how to test application with valid data works.		✓	Not Completed

**Montgomery College
Information Technology Institute (ITI)
Front-End Web Certification Program**

Evaluation Metric	Completed	Not Completed	Recommended Remediation
3. Link to your solution file.		✓	Not Completed
Session III Exercise Projects			
Complete Exercise 7-1 - Develop a rollover application.			
1. Add code to preload the images and implement the rollovers.		✓	Not Completed
2. Add code to the mouseover and mouseout event handlers for the two image elements.		✓	Not Completed
3. Link to your solution file.		✓	Not Completed
Complete Exercise 7-2 - Enhance the Slide Show application.			
1. Add code to start the slide show when the Start button is clicked.		✓	Not Completed
2. Add code to pause the slide show when the Pause button is clicked.		✓	Not Completed
3. Link to your solution file.		✓	Not Completed
Complete Exercise 13-1 - Enhance the Future Value application.			
1. Understand how to use a random number generator.		✓	Not Completed
2. Understand how to format the future value with a dollar sign and commas.		✓	Not Completed
3. Understand how to add the current date to the <p> element below the button.		✓	Not Completed
4. Link to your solution file.		✓	Not Completed

Montgomery College
Information Technology Institute (ITI)
Front-End Web Certification Program

Evaluation Metric	Completed	Not Completed	Recommended Remediation
Complete Exercise 14-2 – Add Exception Handling to the Future Value application.			
1. Understand how to add exception handling to the click event handler for the Calculate button.		✓	Not Completed
2. Understand how to add a throw statement after the if statement in the calculateFutureValue() function.		✓	Not Completed
3. Link to your solution file.		✓	Not Completed
Complete Exercise 14-3 – Enhance the Account Profile application.			
1. Understand how to validate the credit card field.		✓	Not Completed
2. Understand how to validate the expiration date field.		✓	Not Completed
3. Link to your solution file.		✓	Not Completed
Session IV Exercise Projects			
Complete Exercise 16-1 – Enhance the Task List application.			
1. Understand how to code the event handler for the Delete button so it uses the prompt() method to ask the user for the index number of the task to delete, starting with zero for the first task.		✓	Not Completed
2. Understand how to sort the tasks to make sure their order matches the order of the displayed tasks.		✓	Not Completed
3. Understand how to add data validation to the Delete Task event handler so the user's entry has to be a number and has to be an index value that's in the array.		✓	Not Completed
4. Link to your solution file.		✓	Not Completed

Montgomery College
Information Technology Institute (ITI)
Front-End Web Certification Program

Evaluation Metric	Completed	Not Completed	Recommended Remediation
Complete Exercise 16-2 – Enhance the Task List 2.0 application.			
1. Understand how to code the Filter event handler.		✓	Not Completed
2. Link to your solution file.		✓	Not Completed

Notes:

1. Remove Session I Chapter 3-1.
2. Remove Session I Chapter 3-2.
